IN THE SPECIFICATION:

Page 1 immediately following the title, please insert the following:

This is a continuation of U.S. Serial No. 09/913,380, filed August 13, 2001, which is the U.S. national phase of International Application No. PCT/GB00/00478, filed February 14, 2000, the entire respective disclosures of which are hereby incorporated herein by reference.

Please insert a new paragraph beginning at page 6, following line 19 as follows:

figure 1 shows a typical cross-sectional structure of a prior art organic light-emissive device;

Please amend the paragraph beginning on page 4, line 18, as follows:

The third layer suitably comprises a material (a "higher work function material") having a higher work function than those of the first and second cathode layers. The work function of the higher work function material is preferably greater than 3.5 eV or more preferably greater than 4.0 eV. The higher work function material is suitably a metal. The higher work function material and/or the third layer itself preferably has an electrical conductivity greater than 10^5 ~~(*.cm)$^{-1}$~~ $(\Omega.cm)^{-1}$. The higher work function material is preferably Al, Cu, Ag, Au or Pt; or an alloy of two or more of those metals; or an alloy of one or more of those metals together with another metal, or an oxide such as tin oxide or indium-tin oxide. The thickness of the third layer is preferably in the range from 1000 Å to 10000 Å, preferably in the range from 2000 Å to 6000Å, and most preferably around 4000 Å.

Please amend the paragraph beginning on page 7, line 10, as follows:

To form the device of figure 2 a transparent layer of ITO to form the anode electrode 10 may first be deposited on a sheet of glass 14. The glass sheet could be a sheet of sodalime or borosilicate glass of a thickness of, for instance, 1 mm. The thickness of the ITO coating is suitably around 100 to 150nm and the ITO suitably has a sheet resistance of between 10 and 30 ~~*/Ø~~ Ω/□. ITO-coated glass substrates of this type are commercially available. As an alternative to glass, the sheet 14 could be formed of perspex. As an alternative to ITO, gold or TO could be used as the anode.

Please amend the paragraph beginning on page 13, line 13, as follows:

~~The applicant draw attention to the fact that the present~~ The invention may include any inventive feature or combination of features disclosed herein either implicitly or explicitly or any generalisation thereof, without limitation to the scope of any of the ~~present~~ claims. In view of the foregoing description it will be evident to a person skilled in the art that various modifications may be made within the scope of the invention.
